

North Dakota FAASTeam presents:

Aircraft Accidents for Those First to Respond

Unlike an auto accident, aircraft accidents can cover 100s of feet even miles depending the severity of the incident before impact. We will discuss the hazards associated with these types of accidents. Fuel, debris, rockets, chemicals, and many others critical hazards to working with rescue operations. We will cover various accidents and incidents that you may be confronted with as a first responder.

We will also be using a AG aircraft simulator for the Rescue crews to practice extrications from an aircraft at various angles.

Law Enforcement, Fire Fighters, Ambulance Responders, airman, and those working on or close to an airport are welcome.

Directions: Go to the Robert Odegaard Field Airport, Kindred North Dakota on the East side of town next to the High School. Turn in just south of the cemetery, parking on right just North of the aviation ramp.
