

FAA WCAM presents:

FAA Weather Camera Program

This Webinar provides a comprehensive overview of the FAA Weather Camera Program. You will learn about the expanding network of cameras used by the aviation community for preflight planning and inflight monitoring of weather at airports and en route locations.

You will hear from a panel that includes the FAA's Weather Camera program manager, Cohl Pope, AOPA, pilots, and representatives from states that have used and/or implemented the cameras. Discussion topics include the positive impact the program is having on improving aviation safety and how General Aviation and commercial pilots, dispatchers, Flight Service Specialists, and the military are utilizing these cameras to improve flight safety.

Additionally, the webinar will highlight the FAA's plans to expand the weather camera network into more locations within CONUS, and will inform on how you can provide input directly to the FAA on where you and your organization would like a weather camera installed. We look forward to seeing you on December 6th at 1pm EST for this informative discussion on the Weather Camera Program's innovative, proven, and impactful technology. A live Q&A will follow the presentation.
