

AirVenture 2024 Forum - What Went Wrong? Pilot Factors in WX Accidents

Weather-related accidents continue to result in the highest number of annual General Aviation (GA) fatalities. Human error has been identified as a causal factor in many of these accidents. The purpose of this session is to briefly review weather-related accidents/incidents to see what went wrong and what went right. We will review and discuss pilot actions, such as improper/proper preflight planning, pilot perception (incorrect and correct) of the weather, and decision-making, that contributed to these accidents/incidents. Additionally, we will review tools and techniques available to aid the pilot in identifying, assessing, and mitigating weather-related risks.

WINGS/AMT credit available!

To receive WINGS/AMT credit fill out attendance sheet available at the Forum entrance.
