

AirVenture 2026 Forum - Flying In The Colorado Mountains

This presentation will discuss flying in the Colorado mountains and weather issues that should be considered. Colorado's airports experience high density altitudes, even along the Front Range, so pilots must plan for the decreased aircraft performance they will find. The mountains also cause unexpected weather conditions that are often hazardous to aircraft. We will give a brief overview of these and other things to consider when planning a trip to the Colorado high country.

WINGS credit available!

To receive WINGS credit fill out attendance sheet available at the Forum entrance.

The FAA Safety Center is centrally located on the EAA AirVenture grounds on the South side of the control tower. We are the large tan building with the rooftop deck facing the runway. Forums entrance is on the west side of the building.
