Promote Wings Program

Following lunch and starting 1200 we will be presenting two additional segments.

The first will be Preventing Pilot Deviations by Runway Safety.

The second will be Mountain Flying by , as Outside Magazine says, the “King of the bush pilots”, Paul Claus. We are excited to have this opportunity for mountain flying expert Paul to share with fellow Alaska pilots. As a short introduction, this is what others have said about Paul Claus:

"Paul combines the terrain-knowledge of the mountaineer with skills acquired growing up in the cockpit, and he is a genius now at glacier landings." – National Geographic Traveler

Paul's been leading adventurers in these mountains all his life. Harpers & Queen named him the Best Adventure Guide in their 150 Best Places on Earth review. He served as the wilderness survival expert on the Discovery Channel's "Alaska Experiment."
