Select #: CE0144446

Lead Representative GREGORY JAMES

FINZEN

Flying is full of decisions. Many may appear to be routine but even small decisions made in the cockpit can have a large impact on flight safety. Good aeronautical decision-making (ADM) is an essential skill.

Attendees of this seminar will learn about the 3-P Model for ADM and look at some flight scenarios where applying good ADM skills can make a difference in the safe outcome of a flight.

Directions: The seminar will be held in the Education Building in conjunction with Nebraska Airfest & 2012 State-Wide Fly-In. Fly-in traffic will get directions to the seminar at the GA parking area. Attendees entering the event through the main gate will be directed to the Education Building.

A message from the National FAASafety Team Manager

Over 10,150 AMTs earned an AMT Award last year. Will you, this year?
