

FAASTeam presents:

TEM Building - Adapting Threat and Error Management to General Aviation

We strive for the perfect flight, yet it is elusive. Truth be known, there is no such thing as a perfect flight. In our increasingly complex environment, we must manage various challenges from operational and environmental threats. If we do not anticipate and manage these threats, errors may occur.

This presentation is an introduction to Threat and Error Management. Taken from a successful strategy used by the airlines, you'll have a chance to learn how to adapt the very same principles to your flying. See real world examples that you can use to maintain the highest level of safety.
