

FAASTeam presents:

ABS - Managing Unintended Consequences in the EFB/TAA Era

Widespread adoption of new technologies has changed how we plan flights and operate our aircraft during all phases of flight, especially when IFR. But our training and habits often don't reflect the reality of how we're using EFBs, glass cockpits, and sophisticated autopilots. The ease with which we can build a route, check the weather and then fly a trip can ironically leave pilots unprepared for the inevitable twists and turns of a typical flight.

This webinar includes scenarios that: Focus on strategies for modern IFR flight Suggest tactics for using those technologies in different situations Provide techniques for smooth departures, verifying progress enroute and arriving gracefully

Although this American Bonanza Society program is oriented toward pilots of Beech Bonanzas, Debonairs, Barons and Travel Airs, the discussion, techniques and procedures described are valuable to the pilot of any airplane.
