**Lead Representative JOHN  
ANTHONY TEIPEN n/a**

This episode examines how pilots use FOR-DEC during in-flight abnormalities, how maintainers can apply the same framework when troubleshooting faults or deciding whether an aircraft is ready for return to service, and how air traffic controllers and airport operators can use structured decision-making to manage evolving operational situations. By comparing FOR-DEC to other mnemonics, we show how a shared decision model improves safety across aviation roles.

For aviation maintenance technicians (AMTs), this same framework applies directly to troubleshooting, deferral decisions, and return-to-service judgments.

**WINGS & AMT Credit** is earned immediately after upon completion of a short quiz.

**Registration is not required.** If you wish to receive reminders for this free program you may use this link [Eventbrite](https://www.eventbrite.com)

### **A message from the National FAA Team Manager**
