

The Schiff Show - Engine Failure! Prevention - Identification - Confrontation

We'll start with a familiar scenario: a VFR cross-country after refueling that turns into an engine problem and an emergency approach in low ceilings and mist. Using the accident sequence—from the first vibration and oil-pressure anomaly through the last-ditch approach to Flagler County—we'll focus on recognizing engine trouble early, choosing a landing option when options are limited, and avoiding a stall while “stretching” the glide near the ground.

Registration is not required. After viewing the program, WINGS Credit is earned immediately upon successful completion of a short quiz. The link to that quiz is on the page noted below.
