

On Second Thought - What Safer Decision-Makers Have in Common

This episode explores cognitive, behavioral, and social traits associated with safer outcomes among women aviators, drawing from aviation data and behavioral science.

We then translate those findings into practical insights that apply to all aviators—Aviators, maintainers, controllers, and operations personnel—regardless of gender, role, or experience level.

These findings also apply to aviation maintenance technicians (AMTs), whose daily work demands risk assessment, assertiveness, and disciplined judgment.
