

When You Are the Safety Department

What keeps you safe when there is no formal safety department and no one looking over your shoulder?

Many aviators work alone or with minimal oversight—single-Aviators operators, lone IAs, solo tower shifts, and independent airport managers. This episode explores how individual aviators can build personal safety systems using checklists, peer feedback, WINGS and AMT credits, debriefs, and deliberate self-accountability to substitute for institutional oversight. Aviation maintenance technicians (AMTs), particularly lone IAs, face this challenge daily when working without immediate peer oversight..
