

VMC Clubs When the flight controls do not work

This month's topic - We all know that checking flight controls is one of the first items on the "Before Starting Engines" checklist. In fact, this is such a basic item that we also check the flight controls on the walk-around inspection, and then on the "Before Takeoff Checklist" as well. And we have done that so many times that we check flight controls without even thinking about it. Are the flight controls ever wrong?

When it happened to you, what did you do? If it has not happened to you, come find out how other pilots responded to the situation.

Take I-470 to Exit 9, Douglas Drive / Lee's Summit Road turn north. At the bottom of the hill, turn right and follow the road to the end. The Larry Young hangar is on the west side of the parking lot under the Cessna on a Post.
