

FAASTeam presents:

# IFR Charts for VFR Pilots - Advanced Situational Awareness

This is not a webinar – but a live face-to-face seminar focusing on aviation safety and situational awareness.

Come to the Hebron Airport Fly-In on March 19th 2016 and earn some WINGS credit!

As well as the set of VFR charts and the A/FD, there is a parallel set of IFR charts, used for departure, approach and landing, as well as for en-route operations. Within moderation, these IFR charts can provide VFR pilots with enhanced situational awareness as well as providing useful information for terminal and en-route obstacle clearance and collision avoidance.

This seminar is not a crash-course in IFR procedures and certainly does not promote nor condone VFR flight in less than VFR conditions, but it does offer insights into IFR charts and the Terminal Procedures Publication – and how they may be used to enhance situational awareness during VFR operations.

Furthermore, after this seminar – and with a small amount of study - the VFR pilot will be able to benefit from the new ease of switching between VFR and IFR charts on “electronic flight tools” such as ForeFlight, Garmin Pilot and others, and so get better utility out of these tools.

The seminar will include many interactive elements to keep you on your toes - so come

## Event Details

**Sat, Mar 19, 2016 - 09:30 CDT**  
**Hebron Municipal Airport (KHJH)**  
HWY 136  
Hebron, NE 68370

**Contact: Dr. Stephen Bateman**  
**(402) 200-8930**
