

Nashville IMC Club Meeting

This is the third and final installment of our aircraft icing scenarios. Ice has caught you by surprise and isn't shedding as you would expect. You're over unfriendly terrain and need to make some choices quickly. What will your decision be? Also, we'll have a very informative presentation regarding how to actually use the Current Icing Product (CIP), Forecast Icing Product (FIP), and the Graphical AIRMET (G-AIRMET). You'll leave this meeting knowing how to use this information in making a go/no-go decision. This is critical knowledge during the winter months, and as a responsible IFR pilot you must know how to use this data.

Directions: Meeting will be held in the offices of Nashville Flight Training. Please use map link to show location.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
