

FAASTeam Flight Instructor Open Forum

The startle reflex normally triggers within 100 milliseconds of the stimulus, it is pre-emotional and contains physiological and subjective dimensions. A pilot's response to this stimulus can often mean the difference between life and death! So, how do you teach your students to Prepare for the Unexpected? At this seminar we will explore some of the unexpected conditions that can happen during flight and how you can teach your students to be prepared to cope with these situations. We will also be discussing ways to reduce Tailwheel incidents and accidents! Flight Instructors, Ground Instructors, Designated Pilot Examiners, and Instructors in training are welcome and encouraged to attend. Click on the link below and register today as seating is limited!

Directions: Please see map link for directions, Classroom 3 is on the second floor of Hangar 7.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
