

## Slips Skids Spins and Upsets

Loss of Aircraft Control continues to be a significant cause of aircraft accident fatalities. Many of these occur in the vicinity of an airport during departure and approach to landing. This interesting Safety Seminar will be an interactive presentation by an experienced aerobatic CFI discussing potential loss-of-control situations in and around the traffic pattern. There will also be a discussion on recoveries from extreme attitudes. Please come out and join the discussion!

**\*\* Please note \*\*** that this event is open to Doylestown Pilot Association and Warrington Flying Club members and their guests only.

**Directions:** This meeting will be held on the first floor in the "drive through" .

### A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at [www.FAASafety.gov](http://www.FAASafety.gov)!

The FAA Safety Team (FAASafety Team) is committed to providing equal access to this meeting/event for all participants. If you need alternative formats or services because of a disability, please communicate your request as soon as possible with the person in the "Contact Information" area of the meeting/event notice. Note that two weeks is usually required to arrange services.
