

FAASTeam presents:

A Data-Driven Approach to Lowering GA Accidents

This is a highly interactive, face-to-face seminar focusing on improving aviation safety. It is not a webinar.

The Nall report, now in its 27th edition, provides data and commentary on the state of general aviation safety. The report generates much discussion and action by organizations such as the ASI, AOPA, FAA and others – and they produce excellent material for us to study and review. But even though the number of accidents has been generally reducing over time, the causes are frustratingly familiar, and the rate of improvement doesn't seem to be in line with the effort expended - although we will take all we can get.

So, what else can be done to learn from—and then influence—the accident statistics, and why are you the person to do it?

This seminar strives to improve the numbers by direct, continuous and active management of the factor that gives us 75% of all accidents—ourselves. Using data from the Nall report, we'll explore the major causal factors of pilot related accidents, and from this, reinforce essential knowledge and training methods that have perhaps been previously imposed, rather than fully understood.

Following this WINGS seminar, there will be an
