

FAASTeam presents:

# Stabilized Approach and Go-Around!

Focusing on establishing and maintaining a stabilized approach and landing is a great way to avoid experiencing a loss of control. A stabilized approach is one in which the pilot establishes and maintains a constant angle glidepath towards a predetermined point on the landing runway. It is based on the pilot's judgment of certain visual clues, and depends on the maintenance of a constant final descent airspeed and configuration. We will look at this topic with an eye towards the practical how-to for you, the pilot.

**Directions:** Please register for Stabilized Approach and Go-Around! on Jun 25, 2020 7:00 PM EDT at: <https://attendee.gotowebinar.com/register/6114692432203293963>

After registering, you will receive a confirmation email containing information about joining the webinar.
