

ASCEND 2026 - The Emergencies You Were Not Trained For

This presentation covers emergencies not tested on the ACS that the speaker has experienced firsthand or discovered through conversations with others. We will review methods to safely teach these to students and Flight Review candidates. Examples include partial power loss on takeoff, various engine issues, off-airport landings, and more. The more important discussion will be how to teach risk mitigation and a proactive safety mindset to all flight training and pilots, regardless of experience or certificate level.
