

Williamsport Regional Association of Pilots Club Meeting

Every safe and successful flight begins long before the wheels leave the ground. Designed for pilots looking to elevate their preflight planning and risk management, this seminar dives deep into FAA Advisory Circular 91-92 to demystify the weather briefing process.

Attendees will explore the practical ins and outs of standard, abbreviated, and outlook briefings, learn how to extract actionable insights from weather data, and master modern self-briefing tools and techniques. By integrating structured decision strategies—such as weather timelines and risk-based checklists—this session empowers pilots to move past weather anxiety, build rock-solid confidence, and make objective, safe go/no-go decisions every time they fly.

The meeting will be held at the former Flight Service Center building.
