

Water and Emergency Approach and Landings

This seminar will cover survival issues that may arise after completing a water landing whether it be on the ocean, river or lake. The presentation will also address emergency landings into a field or forest. During such an emergency landing, the prime directive is to survive the landing, followed by possessing the knowledge and skills to endure the elements you may encounter after surviving the landing.

Directions: This presentation will be held on the first floor at the Fixed Base Operator (FBO) facility.
