

The Human in Human Factors

At this interesting seminar we discuss the human factors that can lead to poor aeronautical decision making. We'll focus on the brain and how it makes decisions. We'll discuss the biases built into our decision making process and how we can recognize when they cloud our judgment. We'll review data from accidents attributed to human error and discuss techniques to avoid them or at least make their consequences less severe. We'll also discuss the power of knowledge and experience as it relates to airmanship. This fascinating and entertaining look at the interface between the aviation system and the human mind is something no pilot will want to miss. Please click on the link below for more details and to register on-line.

Directions: Please see map link for directions, seminar is in Mancini Hall on the first floor.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
