

Breaking the ICE!

Aircraft Icing during flight can be catastrophic! It disrupts the flow of air over the aircraft diminishing the wing's maximum lift and the propeller's thrust. This reduces the angle of attack for maximum lift, which in turn, adversely affects an aircraft's handling characteristics while significantly increasing drag. Don't get caught in this nightmare! By attending this important briefing you will learn the latest strategies for avoiding icing conditions and learn what you should do if you experience an inadvertent icing encounter. Don't miss this informative event! Please click on the link below for additional information and to register on-line!

Directions: Please see map link for directions, seminar will be held in Mancini Hall on the first floor.

A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
