

Series Update - Managing the Hazards of Aircraft Icing During Take-Off, Cruise, and Landing.

Aircraft Icing is no joke; it can kill you. This is important information for this time of year. Aircraft icing during flight can be catastrophic. It disrupts the flow of air over the aircraft lift surfaces diminishing their maximum lift and propeller's thrust, thus reducing the angle of attack for maximum lift, which in turn, adversely affects an aircraft's handling characteristics while significantly increasing drag. Come and get a refresher update to ensure you have a better understanding on the negative effects of the formation of ice on the aircraft you are about the fly. Don't miss this exclusive opportunity. Click on the link below and register TODAY.

Directions: This presentation will be held on the second floor of the Jet Center. Please call (610) 595-1500 ext. 240 if weather is inclement/snows/ice, etc.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.
Sign up for the FAA's safety services at www.FAASafety.gov!

Event Details

Wed, Jan 6, 2016 - 19:00 EST
Philadelphia Northeast Airport
11301 Norcom Road,
Jet Center
Philadelphia, PA 19154

Contact: Carl Kelley
(215) 510-2874
