

FAA Safety Team presents:

# **Avoid the Unthinkable - Key Strategies for Collision Avoidance**

The more flying hours you accumulate, the more likely you are to be able to relate at least one incident of a near miss incident or having had to execute an aggressive escape maneuver to avoid another aircraft. In this presentation, we will examine the flight scenarios and types of operation that present the greatest risk for an in-flight or on-the-ground collision and best practices to avoid them. We will examine operations at, and in the vicinity of, towered and non-towered airports, the enroute on and off airway cross-country environment, and both VFR and IFR operations. We will analyze how pilot, crew, aircraft, environment, external factors and mission all play a role in both creating and mitigating collision risk. Practical examples will be discussed, drawing from thousands of hours of flight experience and NTSB accident reports. After attending this seminar, you will be more aware and better prepared to avoid a serious or fatal on-ground or mid-air collision. Don't miss this potentially life-saving presentation.
