

## Do Not Get Burned By Summer Weather

In this seminar, you will gain a critical understanding of upcoming summer weather hazards to flying, such as thunderstorms, turbulence, low level wind shear, and various kinds of IMC. You will learn about big picture weather patterns and rules of thumb for predicting major storm system patterns and movements. Using a real time internet connection, we will review the latest on-line weather forecasting products and, together, apply the principles just learned to develop a strategic flight plan for a scenario with summer weather.

**Directions:** This presentation will be held on the first floor at the Fixed Base Operator (FBO) facility.

### A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at [www.FAASafety.gov](http://www.FAASafety.gov)!

The FAA Safety Team (FAASTeam) is committed to providing equal access to this meeting/event for all participants. If you need alternative formats or services because of a disability, please communicate your request as soon as possible with the person in the "Contact Information" area of the meeting/event notice. Note that two weeks is usually required to arrange services.
