

Managing the Hazards of Aircraft Icing During All Phases of Flight

Aircraft Icing during flight can be catastrophic. It disrupts the flow of air over the aircraft diminishing the wing's maximum lift and propeller's thrust thus reducing the angle of attack for maximum lift, which in turn, adversely affects an aircraft's handling characteristics while significantly increasing drag.

Directions: See Map Link. Seminar will be held on the first floor of the FBO.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
