

Do Not Let Winter Bring You Down

At this event you will learn about aircraft icing, why it forms on aircraft and what to do about it. Get ready for winter. Aircraft icing during flight can be catastrophic. It disrupts the flow of air over the aircraft diminishing the wing's maximum lift and propellers' thrust thus reducing the angle of attack for maximum lift, which in turn, adversely affects an aircraft's handling characteristics while significantly increasing drag. Don't miss this exclusive event. Click on the link below and register TODAY.

Directions: This presentation will be held on the first floor at the Fixed Base Operator (FBO) facility.
