

## Postponed- The Hazards and Avoidance of Aircraft Icing

Postponed to December 13, 2018

Aircraft Icing during flight can be catastrophic. It disrupts the flow of air over the aircraft diminishing the wing's maximum lift and propellor's thrust thus reducing the angle of attack for maximum lift, which in turn, adversely affects an aircraft's handling characteristics while significantly increasing drag.

Click the link below and register TODAY!

**Directions:** Enter KILG from Route 13 and park in front of the main terminal building. Seminar will be inside terminal. Go through sliding doors and follow signs to the terminal.

### A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Join us on Facebook: <https://www.facebook.com/groups/GASafety/>

Sign up for the FAA's safety services at [www.FAASafety.gov](http://www.FAASafety.gov)!
