

FAASTeam presents:

Tower Talk with McGuire AFB Air Traffic Control

This webinar will cover the topic of civilian flight operations around military aircraft. McGuire Air Force Base conducts large transport aircraft flight operations that take place both inside and outside of the Class "B" airspace. This webinar will provide information on the services available from Air Traffic Control at McGuire Air Force Base for flight following and traffic avoidance. This will be from the perspective of the military pilot and air traffic controllers. This is particularly important since this is a high volume traffic corridor for both civilian and military aircraft.
