

Pilot Performance-Enhancing the Most Most Important System in the Aircraft

Most aviation safety presentations focus on the operational aspect of flying. But this webinar will look at the most complex and the most important system in the aircraft, which is of course the pilot. More specifically, we will take a quick look at the cognitive skills we need to function and then see some ways to maintain and enhance those critical skills.

The host for the event will be Gene Benson, an internationally known flight instructor and human factors specialist. Two special guest presenters will also be on the flight deck. Lt. Col. Tammy Barlette is a retired US Air Force Fighter Pilot and graduate of the elite US Air Force Weapons School. Lashae Bacon is an eight-year US Army veteran helicopter pilot. Now a civilian and certified personal trainer, her focus is on fitness and nutrition and how it relates to human performance, especially pilots.
