

FAASTeam presents:

WTIC NAFI Weather Seminar Air Venture 2018

These challenges are attributable to numerous factors including regions with little or no radar coverage such as the Gulf, Alaska, and Caribbean, difficulties for pilots to estimate visibility, and limitations of flight planning tools to enable three-dimensional planning to avoid adverse conditions. Other factors include weather information latency, utility of VFR Not Recommended (VNR) statements, lack of ceiling and visibility information in remote areas, and pilot weather training that does not provide experience in adverse weather conditions. This session is intended for flight instructors to highlight weather knowledge areas that have been identified as lacking by pilots, to enhance instructor ability to teach aviation weather, and to provide information on new weather products including their limitations and enhanced benefits

Directions: Weather Seminar for Flight Instructors on Enhanced Weather Products and Training Materials.

A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
