

Distractions - The Silent Intruder

Kim will take attendees through the basic understanding of how your brain handles information, why distractions and interruptions are more prevalent and dangerous than ever, and what to do about it. Attendees will hear about the difference between multitasking and task switching and what happens when you are interrupted or distracted. They will learn how to resume tasks without skipping a step and how to increase their focus. They will also understand why creating another operating procedure or safety protocol after an incident or accident is not the answer.

Directions: Room 206AB
