

## Flying Blind

You may have 20/20 vision ... but what do you really see? We will examine the human brain (hardware) and human mind (software) as they relate to our visual system. Too often we “look” but do not “see.” This can be a function of our “software” and/or “hardware.” We must understand every kind of “blind spot” so that we can incorporate techniques to improve our visual performance.

**Directions:** Room 207AB
