

## Fuel - The Lifeblood of Your Helicopter

This comprehensive session covers fuel specifications, proper receipt procedures, and field quality-control tests to ensure that on-specification, clean, and dry product is delivered to your aircraft. We will review fuel specifications from the ASTM along with standard industry practices for the receipt of aviation fuels. Pilots, mechanics, and facility operations personnel will also come away from this seminar with a good understanding of the safety issues when working with and around aviation fuels.

**Directions:** Room 205AB
