A pilot-in-command retains responsibility of a flight and maintains control. An aircraft owner should do no less when it comes to maintaining their aircraft in an airworthy state. Whether an owner uses a maintenance facility for all or part of the required maintenance on their aircraft, it is important that they remain aware of what is happening. During every annual inspection, there is a time when the owner needs to be involved in the decision making process to ensure they are getting what they are expecting, and what's best for their aircraft. Adrian Eichhorn will discuss this topic and explain how an owner often has options that they may not realize.

Rescheduled to October 5th at 7:00PM

This webinar is being held via Zoom. Register for this event using the link provided below.
