

Do Not Be Dense About Density Altitude

Just because you may live and fly near sea level doesn't mean that you shouldn't be concerned about high altitude airport operations. Planning a trip to the Appalachian Mountains this summer? Western North Carolina has multiple airports at elevations well above sea level where you may have a difficult time taking off and landing. Learn how much hot, high, and heavy conditions can effect your aircraft and how you should plan your trip. The time of day you fly and the baggage you carry can make a huge difference in your aircraft's ability to safely make the weekend vacation trip. To learn more, click the link below and register TODAY.

Directions: Upon arrival at the University, proceed to the Pharmacy Building Complex, Room 104.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
