FAA Safety Team and the Greensboro FSDO presents:

The High Stakes of Poor Risk Management
Aeronautical decision making or ADM is the systematic mental process used by pilots to determine the best course of action in response to a given set of circumstances. This is the human factors side of aviation, which causes approximately 75% of all aviation accidents. And because human beings are so complex, ADM is complicated. There are many facets of ADM to focus on, but today I’ve chosen to talk about the chain of error, a pilot’s tendency to hurry up and forget strategic items, factors affecting decision making, and behavior traps.

Goldsboro Wayne Aviation Association provides organized "hangar flying" focused on building instrument flying, and general knowledge and skills. The organization network promotes a safety culture through continued education and believes that safety and proficiency are developed through education and experience. Monthly Meetings offer an opportunity to share in-flight experiences and valuable safety tips. Through the FAA Safety Program, informative WINGS presentations are offered by aviation professionals. You do not have to be a rated instrument pilot to attend. Membership is encouraged, but not required. Click the link below and register TODAY!
Directions: The college is the first building on the right as you come down Aviation Drive.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.
Sign up for the FAA's safety services at www.FAASafety.gov!

The FAA Safety Team (FAASTeam) is committed to providing equal access to this meeting/event for all participants. If you need alternative formats or services because of a disability, please communicate your request as soon as possible with the person in the “Contact Information” area of the meeting/event notice. Note that two weeks is usually required to arrange services.
