

FAASTeam presents:

Pre-Ignition and Detonation - Meet The Engine Killers

This will seem like a pilot's presentation, but mechanics need to be aware of these issues to help pilots make good decisions when they ask about maintenance issues like fuel contamination, mixing auto fuel and avgas, mixing oil and fuel for 2 cycle engines, picking parts for alterations, flying with excess mag drops, flying with anything at all wrong with the engine, skipping maintenance on magnetos, burning off carbon deposits, turbo operation on a hot day and other operating issues.

Directions: Please register for Pre-Ignition / Detonation AW Topic of the Quarter on Aug 21, 2019 11:00 AM EDT at: [link temporarily removed](#)
After registering, you will receive a confirmation email containing information about joining the webinar.
