

FAASTeam presents:

What Pilots Expect - What Mechanics know

Picking up an aircraft after maintenance should be dealt with caution. Make sure you are a good candidate for retrieving an aircraft right out of maintenance. Have you experienced any engine failures? Any system failures. Remember, human error can happen at any level. A loose connection from a battery can cause a fire, loose fuel hoses, oil hoses, a left-out cotter pin on a main wheel or throttle control. Little things can catch up to you. Just make sure to be prepared and experienced enough to handle any occurrence.

Get to know the mechanic you have hired. They need to know you also. You need to understand how your mechanic thinks. Sit in on this webinar and find out exact what question you both should be asking.

Directions: Please register for What Pilots Expect... What Mechanics know on Jun 18, 2020 7:00 PM EDT at: <https://attendee.gotowebinar.com/register/2491314535495829519>

After registering, you will receive a confirmation email containing information about joining the webinar.
