

## Electrical Systems on Homebuilt Aircraft

Many builders see the electrical planning and installation as a daunting task that they may not be up to. This seminar will step the builder through the basics of planning and installing the electrical systems in their aircraft from basic power wiring through the planning of complex avionics. Best practices will be discussed as well as where to get information and help from the industry and the rest of the builder community.

**Directions:** No GPS address for airport GATE 4, so when near 400 Holt Rd, follow the EAA signs. Please arrive between 9:00-10:30 when we will have someone manning the gate for entry. Outside those times, please call the number on the paper taped to the yellow post for someone to come let you in.
