

NTSB Safety Seminar on Technically Advanced Aircraft

The National Transportation Safety Board is presenting a seminar highlighting the lessons that have been learned from investigations of accidents involving TAA. An NTSB Safety Study completed in 2010 concluded that these “glass cockpit” aircraft experienced a lower total accident rate, but a higher fatal accident rate, than the same type of aircraft equipped with conventional analog instrumentation. NTSB Board Member Earl Weener will be a featured presenter, and attendees will have the opportunity to meet and ask questions of Member Weener and NTSB staff. Please click on the link below to view important registration details. We'll see you there!

Directions: Please see the "Additional Seminar Information" for driving directions to the NTSB Training Center.

A message from the National FAASafetyTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
