

FAA Safety Team presents:

# **NTSB Roundtable (Live Webcast) Preventing in Flight Loss of Control in General Aviation**

More general aviation pilots and passengers die from accidents involving loss of control in flight than any other single factor. But greater pilot situational awareness—both in the cockpit and during flight training—can make a difference. The NTSB is convening a roundtable of industry and government experts to discuss the current state of the problem, and highlight available technologies and training. The roundtable, which will be moderated by NTSB Chairman Robert Sumwalt, will also explore challenges to implementation of current technologies to reduce these largely preventable accidents. Prevent Loss of Control in Flight in General Aviation is on the NTSB's Most Wanted List of transportation safety improvements.
