Select #: EA6544434

FPM John F. Wood

The summer season brings increased convective activity, restricted visibility, the potential for spatial disorientation, density altitude performance limitations, and other hazards that can affect the safety of flight. With the proper knowledge, pilots can develop strategies for mitigating summer flying threats. Our speaker, Chris Loprinze, is the Assistant Chief Pilot for a large Part 91 fractional ownership company. He is a CFII, Designated Pilot Examiner, and FAASTeam Representative. Don't miss this very informative session.

Directions: Please see the "Additional Seminar Information" for driving directions.

A message from the National FAASTeam Manager

Over 10,150 AMTs earned an AMT Award last year. Will you, this year?
