

## Keeping the Blue Side Up

Did you know that about 9 percent of general aviation aircraft accidents are stall/spin accidents? Stall/spin accidents kill almost 14 percent of all people lost in GA aircraft. And this is only the tip of the iceberg. Loss of control on the ground is just as frequent as loss of control in-flight, but with a lower fatality rate. When is the last time you were briefed on avoiding loss of control accidents? Learn how to avoid becoming the next statistic!

**Directions:** Take I-93 or Everett Turnpike to Rte 101/293. Take Exit 1 (South Willow St., Rte 28). Go south past mall through 4 sets of lights. Bear left at 4th light and go to next traffic light. Take right onto Harvey Rd. Take right onto Bouchard Ave. At bottom of Bouchard Ave, turn left on Navigator Road. The museum is housed in Manchester Airport's historic 1937 Terminal Building.

### A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.  
Sign up for the FAA's safety services at [www.FAASafety.gov](http://www.FAASafety.gov)!
