

Dissimilar Aircraft Operations

Dissimilar Aircraft Operations

As general aviation pilots, we have to co-exist with different classes and categories of aircraft. Dirigibles, biplanes, hot air balloons, gyrocopters, business jets, and ultralights all share the sky. Each with their unique operational attributes, we have to respect and understand their idiosyncrasies. From the fixed-wing pilot's perspective the most likely encounter with an aircraft of a different category is helicopters. And that will be our focus tonight – understanding and co-existing with helicopters. Understanding helicopter operational procedures and capabilities/limitations will increase your ability to mitigate the hazard that they may pose.

Directions: Meeting to be held in the conference room of the main FBO building.

A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
