

FAASTeam presents:

Flychology-Aeronautical Decision Making

The presenter, who has a Ph. D. in psychology, will discuss several topics affecting aeronautical decision making:

1. Limits to visual perception that affect spotting traffic
2. Limits to attention that affect instrument scan
3. How habits can be good (allowing multi-tasking) and bad (causing oversights)
4. How deference to authority can work against you in an emergency
5. How cognitive distortions, such as misjudgement of danger, can negatively affect decisions

Visual examples will be presented for most topics; others will be illustrated by flight examples. Advice will be given for ways to correct each of these perceptual and cognitive distortions.

Directions: Follow signs to Western North Carolina Aviation at the Asheville airport. Limited parking in front of Lacy Griffin Building, additional parking in gravel lot diagonally across the street.

If flying in, tell ground control you want the south ramp, between taxiways hotel and kilo
