

Using Battery Powered Tools On Aircraft And Rebuilding Your Aircraft

The use of cordless tools on an aircraft can quickly turn into a disaster. Fuel and paint fumes are extremely flammable around aircraft and we usually do not think about battery powered tools not being explosion proof. We all use the handy tools but do we think about the most obvious safety related issue? Let's talk all about the use of the tools on aircraft.

If you are rebuilding your certificated aircraft find out what regulations and responsibilities you are faced with. We will cover regulations and maintenance tips about your aircraft and how to keep good records and work in supervision with your favorite mechanic/IA. Bring all your questions for a very informative meeting. .

Directions: WNC Aviation, Lacy Griffin Building.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.
