

FAASTeam - Greater Chicago FSDO presents:

Use of Weather Information and Preflight After Maintenance

In the first seminar, "Use of Weather Information," we will take a look at available weather information sources for general aviation pilots and offer guidance on making well-informed weather decisions.

In the second seminar, "Preflight After Maintenance," we will discuss the importance of thorough preflight inspections of aircraft that have just been returned to service. The discussion will include the consequences of inadequate preflight inspections, some common problems that have led to accidents, and what to look for following maintenance.

Directions: For those flying in, park on the ramp in front of the administration building. Those driving to the event may park in the lot to the west of the administration building, located on the northwest side of the field.
